(54) METHOD AND DEVICE FOR GRASPING ACTION AND STORAGE MEDIUM WHERE ACTION GRASPING PROGRAM IS RECORDED

(57)Abstract:

PROBLEM TO BE SOLVED: To provide the method and device which can obtain position information over a wide range and grasp the most suitable position information among pieces of position information as a current position and the recording medium where the action grasping program is recorded.

SOLUTION: Position information on a user is obtained by position information acquisition parts 1011, to 101n having mutually different characteristics. Those pieces of position information are converted by a position information standardization part 102 to position information in common format, which is stored in common-format position information storage parts 1031 to 103n. A current position grasping part, 104 grasps the current position of the user from the pieces of common-format position information stored in the common-format position information storage parts 1031 to 103n. The action grasping part 105 grasps the current action of the user by using the current position and stores the grasped

action as action information in an action information storage part 106.
